

The InnerSource Program Office (ISPO) Working Group

The InnerSource Program Office (ISPO) Working Group develops guidance and products for enterprise InnerSource teams, not individuals or projects.

For those with InnerSource responsibilities in an OSPO, platform engineering, or other centralized group, this working group is for you.

But what is an ISPO?

"Person(s) working on improving the internal code collaboration experience at full organization scale"

Lots of overlap

OSPO <-> ISPO <-> Platform Engineering <-> Internal Engineering <-> Software Engineering Community of Practice

You don't formally need an ISPO for this content to be useful

Q: WHY is the ISPO working group a subset of InnerSource Commons?

A: Our focus on accelerating the teams that run and support InnerSource across an organization rather than guidance for projects or individuals

Our goal for this talk is to get people to learn more about the ISPO working group

<https://github.com/InnerSourceCommons/ispo-working-group/blob/main/CONTRIBUTING.md>

By participating in our working group

YOU can increase the speed and impact of **YOUR** InnerSource Program Office.

Examples of products we are working on specifically for teams that drive InnerSource company-wide:

- Metrics:
- SCM (Source Code Management)
- InnerSource Project Assessment and Linting

Source Code Management (SCM) is:

"How do you set up GitHub, GitLab, etc. configuration at an enterprise level to best balance security and collaboration?"

What did I get from contributing to Source Code Management project?

InnerSource Metrics include:

NEEDS EXAMPLE HERE

Why did I from contributing to collecting examples of how different companies are doing these metrics?

How the ISPO working group operates

Deliver valuable products through collaborative efforts, accommodating participants' availability and interest

When:

Asynchronously

- Slack channel
- GitHub repositories
- GitHub-based Kanban board

Synchronously

- Biweekly working group meetings

How we work

1. Kanban board (*GitHub*)
2. Peer review (*GitHub*)
3. Focus on external products useful to others
 - Markdown books, website pages, and other things that can be linked to from inside company resources or ingested into them.

The ISPO working group can be your force multiplier!

- Produce content at lower cost collaboratively
- Get feedback from deeply experienced people in your niche

Attend an ISPO working group meeting

Get meeting invites by adding an issue: <https://github.com/InnerSourceCommons/ispo-working-group/issues/new>

The working group has the same benefits as open source.

Build it together ... work together ... reduce duplication.

Collaborate with us!
